Problem Set 1

Applied Stats/Quant Methods 1

Due: October 1, 2023

Instructions

- Please show your work! You may lose points by simply writing in the answer. If the problem requires
 you to execute commands in R, please include the code you used to get your answers. Please also
 include the .R file that contains your code. If you are not sure if work needs to be shown for a
 particular problem, please ask.
- Your homework should be submitted electronically on GitHub.
- This problem set is due before 23:59 on Sunday October 1, 2023. No late assignments will be accepted.
- Total available points for this homework is 80.

Question 1 (40 points): Education

A school counselor was curious about the average of IQ of the students in her school and took a random sample of 25 students' IQ scores. The following is the data set:

1. Find a 90% confidence interval for the average student IQ in the school.

```
1 # Calculation using standard normal distribution, but the sample size was small
2 # confidence_level <- 0.90
3 \# z90 \leftarrow qnorm((1 - confidence\_level) / 2, lower.tail = FALSE)
4 # sample_data <- y
5 # n <- length (sample_data)
6 # sample_mean <- mean(sample_data)
7 # sample_sd <- sd(sample_data)
8 # lower_90 <- sample_mean - (z90 * (sample_sd / sqrt(n)))
9 # upper_90 <- sample_mean + (z90 * (sample_sd / sqrt(n)))</pre>
# confint90 <- c(lower_90, upper_90)
11 # cat("90% Confidence Interval:", lower_90, "-", upper_90, "\n")
12 # Calculate it with the t distribution
sample_mean <- mean(y)
sample_sd \leftarrow sd(y)
sample_size <- length(y)
16 confidence_level <- 0.90
17 degrees_of_freedom <- sample_size - 1
18 t_critical \leftarrow qt(1 - (1 - confidence_level) / 2, df = degrees_of_freedom)
standard_error <- sample_sd / sqrt(sample_size)</pre>
20 confidence_interval <- c(sample_mean - t_critical * standard_error, sample_mean + t_
       critical * standard_error)
cat ("90% Confidence Interval for Average IQ:", confidence_interval, "\n")
```

2. Next, the school counselor was curious whether the average student IQ in her school is higher than the average IQ score (100) among all the schools in the country.

```
1 # Hypothesis testing:
 2 # Null hypothesis (HO): The average student IQ of the school is less than or equal to
                 the national average IQ score.
 3 # Alternative hypothesis (H1): The average student IQ in the school is greater than
                 the national average IQ score.
 _4 # The alternative hypothesis (H1) describes my research hypothesis,
 _{5}\ \# so it focuses on a 'greater than' scenario.
 6 # Therefore, a right/upper-tailed hypothesis test should be used,
 7 # with p-value calculated as p_value = 1 - pt(t_statistic, df = degrees_of_freedom)."
 8 # Make a decision
 \texttt{9} \ \ y \longleftarrow \texttt{c} \ (105, \ 69, \ 86, \ 100, \ 82, \ 111, \ 104, \ 110, \ 87, \ 108, \ 87, \ 90, \ 94, \ 113, \ 112, \ 98, \ 80, \ 97, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108, \ 108
                 95, 111, 114, 89, 95, 126, 98)
sample_mean <- mean(y)
11 sample_sd <- sd(y)
sample_size <- length(y)</pre>
confidence_level < 0.05
degrees_of_freedom <- sample_size - 1
15 t_statistic <- (sample_mean - 100) / (sample_sd / sqrt(sample_size))
16 p_value <- 1 - pt(t_statistic, df = degrees_of_freedom)
if (p_value <= confidence_level) {</pre>
           cat ("Reject the null hypothesis. The average student IQ is higher than the national
                 average IQ score")
          else {
            cat ("Fail to reject the null hypothesis. The average student IQ is less than or equal
                   to the national average IQ score")
```

Fail to reject the null hypothesis. The average student IQ is less than or equal to the national average IQ score

Question 2 (40 points): Political Economy

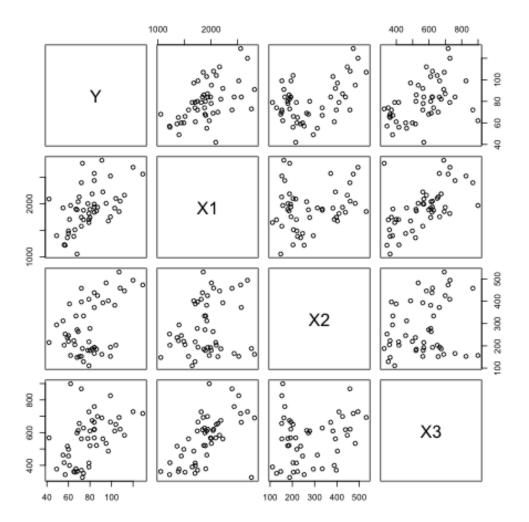

Researchers are curious about what affects the amount of money communities spend on addressing homelessness. The following variables constitute our data set about social welfare expenditures in the USA.

Explore the expenditure data set and import data into R.

1. Please plot the relationships among Y, X1, X2, and X3? What are the correlations among them (you just need to describe the graph and the relationships among them)?

```
1 # read in expenditure data
  {\tt expenditure} \leftarrow {\tt read.table} \ ("https://raw.githubusercontent.com/ASDS-TCD/StatsI\_Fall2023/Statesings) \ ("https://raw.githubusercontent.com/ASDS-TCD/Statesings) \ ("https://raw.githubusercontent.com/ASDS-TCD/S
                    main/datasets/expenditure.txt", header=T)
 4 # 1
  5 data <- read.table(text = "

cor (expenditure ["X1"], expenditure ["X3"])
_{76} # 0.2210149 X2 and X3: Positively correlated, weak relationship.
cor (expenditure ["X2"], expenditure ["X3"])
```

Y and X1: Positively correlated, strong relationship.

Y and X2: Positively correlated, moderate strength of relationship.

Y and X3: Positively correlated, moderate strength of relationship.

X1 and X2: Positively correlated, weak relationship.

X1 and X3: Positively correlated, strong relationship.

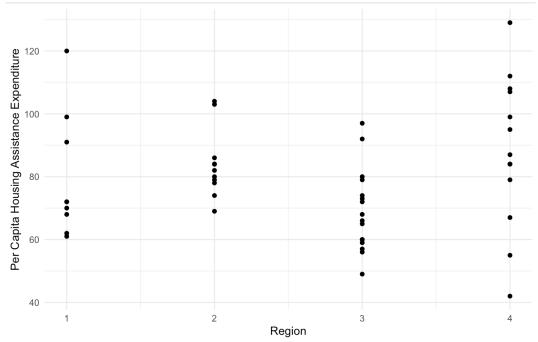

X2 and X3: Positively correlated, weak relationship.

2. Please plot the relationship between Y and Region? On average, which region has the highest per capita expenditure on housing assistance?

```
1 # 2
2 library(ggplot2)
3 # Create a scatter plot to show the relationship between Y and Region
4 # Calculate the average Y value by Region
```

```
# Find the region with the highest average Y value
ggplot(data, aes(x = Region, y = Y)) +
geom_point() +
labs(x = "Region", y = "Average Housing Assistance Expenditure (Y)") +
theme_minimal()

average_by_region <- aggregate(data$Y, by = list(data$Region), FUN = mean)
max_region <- average_by_region[which.max(average_by_region$x),]
cat("On average, the areas with the highest per capita expenditure on housing assistance are
:", max_region$Group.1, "\n")</pre>
```

On average, the areas with the highest per capita expenditure on housing assistance are: 4

3. Please plot the relationship between Y and X1? Describe this graph and the relationship. Reproduce the above graph including one more variable Region and display different regions with different types of symbols and colors.

```
# 3
2 # Plot a scatter plot of the relationship between Y and X1,
3 # using different types of symbols and colors for different regions
4 ggplot(data, aes(x = X1, y = Y, shape = as.factor(Region), color = as.factor(Region))) +
5 geom_point() +
6 labs(x = "per capita personal income in state", y = "housing assistance in state") +
7 theme_minimal()
8 # 0.5317212 Y and X1: Positively correlated, strong relationship
9 cor(expenditure["Y"], expenditure["X1"])
```

Y and X1: Positively correlated, strong relationshi
